

Administrative Information Management System (AIMS)

Creating an integrated solution for the provincial health system, employees, clients, patients, residents and families

AIMSproject.ca

Current state

Low level of integration of processes and systems province-wide

Activities being completed in a non-standardized manner

Lack of real-time, accurate and integrated information for effective decision-making

Lack of province-wide information makes it challenging to determine progress and identify opportunities for improvement

What is AIMS?

82

Replace 82 aging, non-integrated systems into one consolidated suite to manage core functions

The program will focus on 5 core areas:

- Human Capital Management (e.g., payroll, scheduling, time & attendance)
- Finance
- Supply Chain Management (e.g., inventory & order management)
- Security
- Benefits Realization

5

The program offers significant opportunity and benefit for various users and stakeholders

Benefits for health system

Integrated, strategic information aids in effective decision-making

Data accuracy and reliability improves planning, forecasting and reporting

Standardized tools enable consistent policies and processes province-wide

Creating a consistent & positive experience

Benefits for employees, clients, patients, residents and families

Reduced time and effort spent on administrative tasks, freeing more time for value-add work

Right resources available at the right time, right place, and in the right amount

Redirect savings into delivering patient care

A strategic approach will achieve the desired outcomes of the program

The journey to-date and the road ahead
